

EMME ANTINCENDIO

ITALIAN STYLE FOR A SAFER WORLD

Signs 2022

INTRODUCTION

The purpose of signage and of safety signs is to attract attention in a quick and easy understandable way to objects and situations that can cause certain situations, in particular:

- Prohibiting dangerous behaviors;
- Warning exposed people of a risk or a danger;
- Provide indications relating to emergency exits and emergency and rescue vehicles;
- Prescribe safety behaviors for safety purposes ; Indicate further elements of prevention and safety.

The safety sign surface must be suitably sized in relation to the distance from which the sign must be recognizable.

The size of a generic or safety sign must comply with the following formula : $A \geq L^2 / 2000$: A represents the sign surface expressed in m² and L the distance in meters from which the sign must be recognizable.

In the following list the minimum surfaces of the signal prescribed are reported applying the formula in certain circumstances.

Distance in meters	5	10	15	20	25	30
Safety sign surface cm ²	125	500	1125	2000	3125	4500

In compliance with annex 1 of Legislative Decree 1493/96 safety and contrast colors must be used.

Furthermore the safety signage for the prevention of injuries, the protection from fire, the information on health hazards and evacuations emergency is regulated by technical standard UNI EN ISO 7010:2021. The shape and color of each safety sign conform to ISO 3864-1 and the design of graphic signs conform to ISO 3864-3 The UNI EN ISO 7010:2021 standard applies to all sites where issues related to safety of people urged to be faced, as the colors of the symbol, reported in the following list:
