## 9478-2 Dust disposal equipment

Foldable mobile stainless steel equipment for the recovery of spent powders from portable and wheeled pressurized fire extinguishers directly into 1000 kg big-bags

### Description:

The equipment is a valid system for emptying pressurized, portable and wheeled powder extinguishers, exploiting the internal pressure of the extinguishers without the aid of motorized machinery.

To make it more versatile and functional, it is equipped with a removable big-bag support surface, so it can be used both with motorized forklifts and with normal pallet trucks, as well as on equipped workshop trucks.

The appliance is equipped with two differentiated emptying points, one of which with a rubber flange with calibrated holes that allows you to empty portable fire extinguishers without dismantling the hose, the second with a high pressure hose and quick coupling for emptying wheeled fire extinguishers.

Also equipped with a newly developed dust filter that prevents dust from escaping, keeping the working environment clean and healthy.

Entirely made of stainless steel, the structure closes on itself thanks to its hinges, significantly reducing the overall volume, facilitating transport and movement.

Equipped with a support surface for portable fire extinguishers, equipped with positions for the 1193 manual vice (not included in the supply).

- Dimension: LxPxH 1100x1300x1620 mm;
- Weight: 65 Kg.

### EQUIPMENT ON REQUEST:

1193 - manual vice for portable fire extinguishers.
